

# WINDOWAGENT IN-WINDOW UNITS

The WindowAgent through-glass touch system applies to the inside of your storefront window and turns it into a touch screen that customers can use from the outside of your window.

The WindowAgent through-glass touch system stays safe with all of the technical components situated safely behind the window.

Through-glass touch screen technology continues to work despite weather conditions on glass.

## Details

Having an in-window unit for WindowAgent allows you to give the empty space in your office window a whole new purpose! By allowing users to interact through the glass, passersby will become enthralled with the ease of use.

Not only does this attract attention to your company's listings through the WindowAgent application, but it also draws customers straight to your office door!

In-window units operate by utilizing the following:

Compact PC Unit

High-Bright, High-Resolution Display

State-of-the-Art Touch Foil
